

EWRAP™

EMERGENCY WIRELESS ROUTING ACCESS POINT

EWRAP™ is a portable, secure, single source communications field mobility solution that connects emergency workers and first responders working in the field to base site resources.

Secure Remote-Site Communications Source

- Communications backhaul for handheld devices
- Wireless connectivity on cellular, Wifi, public access, satellite, or emergency broadband
- Internal battery ensures continuous power
- Easy to read battery indicator
- Automesh network capability to create a highly redundant, local, high-speed network
- Intelligent router automatically chooses the best network & allows multiple modes of configuration between remote and base sites
- 3G and 4G modem support
- Ethernet port for connectivity to internet, local computer, or satellite connection
- Ruggedized Pelican® case with one switch activation.
- Convenient 12V outlet for charging portable devices

“Within minutes we had a wireless network in the field. I was amazed at how fast and easy it was to use.”

EMS Captain

EWRAP™

EMERGENCY WIRELESS ROUTING ACCESS POINT

INTELLIGENT AND PERSISTENT ROUTER

The EWRAP™ provides a secure connection between mobile computing devices, laptops, cameras, and other 802.11 b/g/n devices, to a reliable, persistent backhaul connection.

MESH NETWORK CAPABLE

Multiple EWRAP™ units can mesh together automatically creating a highly redundant, local high speed network. Connected devices can seamlessly roam between EWRAP™ units without losing connectivity.

EASY TO OPERATE

Single switch operation makes deploying easy. Turn the EWRAP™ on by turning a single switch then extend the antenna for extended range access for connected devices.

Whether you are managing a large scale event or responding to a mass casualty or emergency situation, your teams will be able to share data and stay in touch with your operations center.

APPLICATION USES

- EMS PROVIDERS
- DISASTER RESPONSE TEAMS
- MILITARY ENVIRONMENT
- SEARCH AND RESCUE

PRODUCT BENEFITS

- PORTABLE
- RUGGED
- FLEXIBLE
- EASY TO USE
- INTELLIGENT
- AUTO MESHING
- HIGHLY SECURE
- COST EFFECTIVE
- VIDEO STREAMING

LOCAL EWRAP MANAGEMENT PORT
Ethernet port is used for regular update and maintenance configuration

LOCAL INTERNET ACCESS PORT
Ethernet port is used to connect a local computer to the EWRAP™ device via ethernet cable as opposed to a wireless connection

SATELLITE/ALTERNATE BACKHAUL
Ethernet port used to connect EWRAP™ to satellite or other backhaul devices

EASY TO READ BATTERY LEVEL INDICATOR AND STANDARD 120V CHARGING PORT
