DISEASE SURVEILLANCE ™

HC Disease Surveillance system allows Case Managers and Public Health workers the ability to register large numbers of patients that are suspected Persons Under Investigation (PUI) who may be required to remotely self-monitor and report daily vitals and symptoms. Hundreds or thousands of individuals can be registered, uploaded and managed providing Case Managers dashboards and views for easy tracking, monitoring and reporting.

The Disease Surveillance notification system sends out daily reporting reminders for the designated incubation period, and allows the PUI's to remotely report their information from a smart phone or any web enabled device. Case managers save time by managing by exception, those cases that either fail to report or become symptomatic needing further attention and referral to a medical facility.

KEY SYSTEM FEATURES:

- Quickly Upload and Manage Registration of Individuals and Disease Types

- Customize and View Case Manger Specific Dashboards

- Receive Real-Time notifications of PUI's with symptomatic changes or Gaps in Reporting Intervals

- Update and Manage PUI records as needed remotely

- View PUI reporting, vitals history or PUI Videos and symptomatic changes

- Configure messaging to PUI's through daily reminders and text messages Individuals to be monitored into the system

- Manage large numbers of cases by leveraging the system notification engines

- Configure messaging to PUI's through daily reminders and text messages
